

## DIFFERENTIAL SCANNING CALORIMETER

Differential Scanning Calorimeter is designed to determine the inner heat transition relating to temperature and heat flow. Differential scanning calorimetry is fast, very sensitive and easy to use.

Used in Polymer Development, Performance Testing, Quality Control, Crystallization Process, Glass Transition Temperature, Oxidation Induction Time (OIT), Reaction Heat, Heat Enthalpy, Melting Point, Phase Transition.

## **DSC11** DIFFERENTIAL SCANNING CALORIMETER

New designed oven structure ensures high resolution and good stability of base line.

Air flow meter may control the air flow rate accurately, the test data can be recorded into the database directly.

The instrument is bilateral control, may be controlled by both main frame and software.

User-friendly interface, easy operation.

## **SPECIFICATIONS**

| Model                        | DSC11-800RT                                                                                                                                                                                                         | DSC11-800C          | DSC11-600RT                                                                                                              | DSC11-600C                                                 |  |  |
